North Sea island of Juist
DHL parcelcopter
launches initial operations
for research purposes

DRONEZINE

LA PRIMA RIVISTA DEDICATA AI DRONE

The flight route to the island of Juist is roughly 12 kilometers. The flight will be completely automated for the first time. This means that a pilot does not have to take any action at all during any phase of the flight.

For safety reasons and in compliance with the requirements set by the responsible agencies, the DHL parcelcopter will be constantly monitored during the flight by a mobile ground station in Norddeich so that manual action can be immediately taken in real time if a malfunction or emergency occurs. The ground station will also maintain constant contact with air traffic controllers.
